DETAILED ACTION

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows: Claims 4-7, 10, 13-16, 39-42, 44-46, and 48-51 have been cancelled, as being drawn to non-elected embodiments of the invention, since the allowed claims (as discussed below) are not generic.

Election/Restrictions

2. This application is in condition for allowance except for the presence of claims 4-7, 10, 13-16, 39-42, 44-46, and 48-51, directed to a species non-elected without traverse. Accordingly, claims 4-7, 10, 13-16, 39-42, 44-46, and 48-51 have been cancelled.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to anticipate or make obvious the inventions of claims 1-3, 8-12, 17-21, 23, 24, 26-33, 70-76, 81, and 82, including, *inter-alia*, classifying a disordered breathing event as mixed central and obstructive disordered breathing if measured respiratory effort motion is equal to or above a

Art Unit: 3735

certain threshold for a first portion of the event and below the threshold during a second portion of the event.

The prior art of record fails to anticipate or make obvious the inventions of claims 34-38, 43, 47, 52, 53, 56-59, 61-69, and 77-79, including, *inter-alia*, classifying a disordered breathing event as obstructive if a motion threshold is met or exceeded during a first portion of the event, and as central if the motion signal is below a motion threshold during a second portion of the event.

Cho (US Patent 6641542) discloses classifying disordered breathing in a patient by detecting a sleep disordered breathing event (column 8, lines 46-48; step 410), sensing motion associated with respiratory effort during the event (column 6, lines 52-54, column 7, lines 19-32, 47-49, and 63-65; step 420), and classifying the event based on the sensed motion (column 6, lines 57-65; column 9, lines 16-19; step 430), where the detection, sensing, and classification are all performed implantably (figures 1 and 2; column 3, lines 14-21). Cho does not disclose using a motion threshold to compare motion associated with respiratory effort during two time periods.

Brydon (US Patent 6547743) discloses that signals indicative of both central and obstructive events may be expressed simultaneously during mixed apnea events (column 20, lines 43-46), and that a disordered breathing event would be classified as obstructive if a motion threshold is met or exceeded and as central if the threshold is not met, but does not disclose classifying portions of a single event as either of the two.

Burton (US Patent Application Publication 2007/0032733) discloses a method of classifying mixed central and obstructive disordered breathing events as when periods of both effort and non-effort are present in the respiration signal (paragraph [0510]).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
